Evolve

OVERVIEW

This workshop equips border security professionals, policymakers, and technologists with the knowledge to understand and evaluate the use of AI in border environments. Participants will gain insight into operational tools, governance frameworks, and strategic considerations required to implement AI responsibly—balancing innovation, legality, and public trust in a domain where sovereignty and human rights intersect.

Audience

Designed for border and immigration officers, national security personnel, customs and aviation authorities, digital identity specialists, AI regulators, and professionals working in migration, homeland security, or digital governance. Also relevant for human rights monitors and legal experts dealing with mobility technologies.

Instructors

Led by security technologists, AI governance specialists, border control consultants, and legal experts in surveillance and mobility. Instructors offer a cross-disciplinary approach that merges technological understanding with regulatory awareness and human rights sensitivity.
