OVERVIEW

This workshop equips security professionals and decision-makers with a comprehensive understanding of cyber operations and their strategic, technical, and legal dimensions. Participants will gain insight into how cyber capabilities are used in defense and offense, how to assess cyber threats at an operational and policy level, and how to build cyber-resilient systems in complex security environments.

Audience

Designed for cybersecurity specialists, defense and intelligence officers, national security professionals, IT managers in critical infrastructure, policy advisors, and legal experts in digital security. Also relevant to institutions developing cyber norms, resilience frameworks, or involved in digital sovereignty.

Instructors

Led by cyber warfare analysts, cybersecurity consultants, military strategists, and international law scholars with practical experience in cyber threat operations, digital forensics, defense doctrine, and cyber diplomacy. Instructors offer technical clarity and strategic context for actionable understanding.
