Evolve

OVERVIEW

This workshop equips participants with a strategic understanding of how cyber capabilities are developed, integrated, and used for deterrence purposes. By connecting military doctrine, intelligence, law, and policy, the training enables professionals to think critically about how to shape credible responses, build institutional resilience, and reduce the risk of escalation in cyber confrontations.

Audience

Designed for national security officials, cybersecurity strategists, military officers, intelligence analysts, policy advisors, legal experts in defense and international law, and researchers in strategic studies or conflict resolution. Also suitable for private sector leaders in critical infrastructure and cyber risk.

Instructors

Led by cyber defense strategists, military planners, international security scholars, and former intelligence officials with experience in cyber operations, strategic signaling, and digital conflict policy. Instructors bridge the gap between operational insight and high-level strategy.
